

# Sound Sculpture Proposal

## Ambition.

The purpose of this project is to liberate every child into believing anything in their hands or anything surrounding them is an ability to make.

## How this happens.

By creating a series of interactive sculptures for an audible playground Each sound sculpture will be created from conventional materials and will be responsible for introducing experimental music to any child that engages with it. The Careful design of the sculptures will not only allow them to imitate sounds that exists in nature and other everyday matters but Give them the ability to be transportable for exhibiting in other schools.

## For what reason

the ability to give a child the ownership over their own creativity and allowing them to create and compose without ever feeling the burden of having to understand traditional music. This removes all prejudice and gives additional room for experimental music. By dealing with the importance of sound educates that our ability to hear should never be unappreciated or over looked. The sculptures give children possibilities for musical collaborations and even live performances. The transportability will Create relationships between other local schools and their pupils. Children will also realise the exciting fact that anything can be made creative consequently enrolling young original musicians and make every child a composer.

(should I comment more on why its for children?)

## Why you should be involved

This is just as much about experimental unique sounds as it is a for experimental unique ways of educating. It is a project Intend to expand to schools up and down the country.

(would it be better to write this after researching the people/person i'm pitching to?)

## Health and safety

The material used in the construction of each sculpture with be chosen predominantly by level of safety and meticulously checked in initial design and completion before being situated in a school.

(Not to sure on what to elaborate on here)

## Budget and funding

(Is this primarily an estimation design costs?)
